WPI; 1998-364650/32. N-PSDB; AAV38513. Human G-protein coupled receptor, HNFJD15 - used e.g. in treatment and diagnosis of infections e.g. by HIV-1, HIV-2 and cancers and screening of antagonistic or agonistic compounds.

Claim 15; Fig 1; 19pp; English.

This represents a human 7-transmembrane receptor, HNFJD15. HNFJD15 is a human G-protein coupled receptor and can be used in vaccines to protect amamals from infections e.g. bacterial, fungal, protozona and viral infections (especially infections caused by HYV-1 or HIV-2), cancers and Parkinson's disease. The HNFJD15 polypeptides can be used to produce antibodies which are used to treat such infections, isolate or identify close expressing the polypeptide or to purify the polypeptide. The polypeptide or to purify the polypeptide. The activating or inhibiting activation of HNFJD15. They can be used to diagnose diseases and susceptibility to diseases related to expression or activity of HNFJD15.

```
The present amino acid sequence represents EX33, a human inflammatory disease-related G-protein coupled receptor (GPCR). G-protein coupled receptors are important targets in therapeutic applications because they are involved in a wide variety of physiological and pathological processes. The invention comprises the use of the EX33 polypeptide and polymucleotide in the diagnosis or treatment of a neutrophil-associated inflammatory disease. The EX33 polypeptide, EX33 polymucleotide, an antibody specific to the EX33 polypeptide, and antibody specific to the EX33 polypeptide, and an antisense oligonucleotide/polymucleotide probe specific to the EX33 polymucleotide are useful in the diagnosis or treatment of neutrophil-associated inflammatory diseases, such as chronic obstructive pulmonary disease (COPD), adult respiratory distress syndrome (ARDS), rheumatoid arthritis, and inflammatory bowel diseases (e.g., Crohn's disease and ulcerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 MWNSSDANFSCYHESVLGYRYVAVSWGVVVAVTGTVGNVLTLLALAIQPKLRTRFNLLIA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                            This invention describes a novel human monoamine receptor-1 (MAR1) gene (I) which has cytostatic activity and can be used for gene therapy. (I), and derived (anti) sense oligonucleotides, are useful in treatment and diagnosis of (I)-related diseases (possibly tumours and psychiatric disorders), for producing transgenic/knockout animals, and for recombinant expression of the protein (II) that it encodes. (II) is useful in ligand-binding studies and screening assays, also for treatment and diagnosis of (II)-related diseases. This sequence represents the human MAR1 monoamine receptor-1 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

The invention relates to a method for screening G protein-coupled receptor (GPCR) genes (ABZ42870-ABZ43216) and/or GPCR proteins (ABP95556-ABP95942) by extracting open-reading frames containing 6-8 transmembrane domains with 250-1000 amino acid residues to give a gene homologous with a known GPCR gene. The receptor proteins and encoded genes are useful for studying in vivo signal transduction mechanism and identifying targets for drug development e.g. based on olfactory and justifying targets form of agonists and antagonists by screening intinsic and extrinsic ligands as bitter taste inhibitors, taste enhancers and targrance improvers. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               300

The invention relates to a novel method for identifying a candidate p21 pathway modulating agent. The novel method comprises contacting an assay system, comprising a purified MP21 polypeptide (modifier of p21) or nucleic acid, with a test agent under conditions, so that but for the presence of a test agent under conditions, so that but for the and detection of test agent biased activity of the assay system. The novel method of the invention is useful for identifying a candidate p21 pathway modulating agent. The invention also includes a method for modulating the p21 pathway of a cell, and a method for diagnosing a disease e.g. cancer in a patient. The identified modulators are useful in svariety of diagnostic and therapeutic applications including angeful in a variety of diagnostic and therapeutic applications including represents an MP21 protein of the invention
Identifying candidate p21 pathway modulator, by contacting an assay system having modifiers of p21 polypeptide or gene with a test agent to provide a reference activity in system and detecting test agent-biased

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (I) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for

treating immune-related diseases, growth-related diseases, cell respective diseases, cell respectation-related diseases, growth-related diseases, cell respectation-related diseases, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, atherosclerosis, bacterial, fungal, protozoan or viral infections, catheoarthritis, osteoprosis, canner, cardiomypathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, canxiety, depression, schizophrenia, dementia, mental retardation, memory loss, epilepsy, asthma, tuberculosis, obesity, nausea hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be cheed in immunoassays and immunodiagnosis. ABZ42523 to ABZ42869 encode GPCR proteins given in ABP81675 to ABP82018, which are used in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  360
                                                                                                                                                                                                                                                                                                The invention relates to G-protein coupled receptor (GPCR) polypeptides and encoding polynucleotides selected from TGR20, TGR31, The polypeptides and nucleic acids are useful for identifying compounds for treating a TGR-associated disorder, such as psoriasis, inflammatory bowel disease, huperlipidemia, immune and blood disorders, ulcerative colitis, Crohn's disease or spleen enlargement. They are also useful for identifying cells such as kidney, liver, hypothalamus, colon, adipose, or spleen cells, for forensics and paterminty determination, diagnosing diseases and examining signal transduction. The present sequence represents a human TGR35 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                         New G-protein coupled receptor polypeptides and polynucleotides useful for identifying compounds for treating a TGR-associated disorder, e.g. psoriasis, inflammatory bowel disease, hyperlipidemia, Parkinson's disease, anemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 NITLADLLYCTLLQPPSVDTYLHLHWRTGATFCRVFGLLLFASNSVSILTLCLIALGRYL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is the protein sequence of a novel human orphan g-protein coupled receptor, designated hp15a. The endogenous ligand for hp15a is likely to be a neuromodulator since the receptor is present in several regions of the human brain. The invention provides hp15a nucleic acids, vectors, host cells, antibodies, probes, antisense oligonucleotides, transgenic non-human animals, methods of isolating the receptor, methods of treating an abnormality that is associated with activity of hp15a e.g. cardiovascular or gastrointestinal disorders, and methods of determining binding of compounds to hp15a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New recombinant nucleic acid, useful for preparing a composition for treating disorders linked to human hp15a receptor e.g. cardiovascular or gastrointestinal disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9

```

The invention relates to novel genes (AA199548-AA199604) and proteins (AAM99936-AAM99936) useful for preventing, treating or ameliorating conditions e.g. by protein or gene therapy. The genes are medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification.

The nucleic acids, proteins, antibodies and (ant) agonists are useful in the nucleic acids, treatment and prevention of: (a) cancer, e.g. breast and covarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune of disorders e.g. Addison's disease, allearyes, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, cardiovascular disorders such as myocardial ischaemias; (d) wound healing cratious diseases such as viral, bacterial, fungal and parasitic infections Note: The sequence data for this patent did not form part of from WIPO at ftp.wipo.int/pub/published_pct_sequences

18-APR-2000; 19-MAY-2000; 07-JUN-2000;

The invention relates to G-protein coupled receptor (GPCR) polypeptides and encoding polynucleotides selected from TGR20, TGR23, TGR28, TGR283, TGR341, TGR211, TGR216 and TGR79. The polypeptides and nucleic acids are useful for identifying compounds for treating a TGR-associated disorder,

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Claim 11; SEQ ID NO 15188; 3071pp + Sequence Listing; English

AAKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased

```
ö
expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (1) polynucleotides may be used to produce the secreted (1), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (1) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 sequences from the present invention. AAK84942 to AAK54950 and AAM3169 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         213 DQYKLRQASIHSNHVARTDEAMPGRFQELDSRLASGGPSEGISSEPVSAATTQTLEGDSS 272

(HUMA-) HUMAN GENOME SCI

Birse CE, Rosen CA;

WPI; 2002-122018/16. N-PSDB; ABL89786 Novel 1405 isolated polypeptides, useful for diagnosis, treatment and prevention of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders

Claim 11; SEQ ID NO 1753; 2081pp + Sequence Listing; English.

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and

The present invention relates to the isolation of novel human uterine motility-association polypeptides, and cDNA (AAS28936-AAS28994) and genomic sequences encoding for these polypeptides. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with uterine motility such as pregnancy and labour, and menstrual disorders. The polynucleotide sequences of the invention are also useful in gene therapy. AAU18094-AAU18152 represent novel human uterine motility-association polypeptides. Note: The sequence data for this patent did not form part of the printed specification, but ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MWNSSDANFSCYHESVLGYRYVAVSWGVVVAVTGTVGNVLTLLALAIQPKLRTRFNLLIA 60

                                                                                                                                                                   Homo sapiens
           AAU21583;
The invention relates to novel mucleic acids and polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to these polypeptides. The polymucleotides are especially useful in the cation polypeptides. The polymucleotides are especially useful in the include kidney disorders (e.g. real failure or nephritis).

Cardiovascular disorders (e.g. hypertension or mycardial infarction), electrolyte imbalance disorders (e.g. hyponatraemia or hyperkalaemia), electrolyte imbalance disorders (e.g. hyponatraemia or hyperkalaemia), neoplastic disorders (e.g. nephtoma or renal cell cancer), autoimmune disorders, neural activity and neurological disorders, wound healing and respiratory disorders. AAU18644-AAU18715 represent the novel human renal and cardiovascular-associated amino acid sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at: ftp.wipo.int/pub/bublished_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 MWNSSDANFSCYHESVLGYRYVAVSWGVVVAVTGTVGNVLTLLALALQPKLRTRFNLLIA 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polynucleotides and polypeptides, useful for diagnosing, treating, preventing or prognosing e.g. kidney, cardiovascular, blood, electrolyte imbalance or neoplastic disorders, autoimmune diseases, cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Match 22.2%; Score 454; DB 4; Length 116; Local Similarity 98.9%; Pred. The present invention relates to the isolation of novel human neoplastic disease associated polypeptides, and cDNA (AAS34767-AAS35050) and DNA sequences encoding for these polypeptides. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of disorders involving neoplastic disease such as hyperproliferative disorders (e.g. leukaemla, bone cancer, bladder cancer, brain stem glioma, adult liver cancer, childhood cerebellar astrocytoma, or hodgin's lymphoma). The sequences of the invention may also be useful for treating other disorders, such as neural disorders, immune system disorders, muscular disorders, such as neural disorders, gastrointestinal disorders, pulmonary disorders, cardiovascular disorders and renal disorders. The polymucleotide sequences of the invention are also useful in gene therapy. AAU21568-AAU21851 represent the novel human neoplastic disease associated polypeptides of the invention. Note: The sequence data obtained in electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was
                                                                                                                                                                                                                                                                                                                                                                                                              Novel polypeptides and polynucleotides useful as diagnostic reagents to diagnose diseases or disorders associated with aberrant expression or activity of polypeptides, and for treating cancers, rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 MWNSSDANFSCYHESVLGYRYVAVSWGVVVAVTGTVGNVLTLLALAIQPKLRTRFNLLIA 60

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C; Accession: T1340
R; Murphy, L; Harris, D.; Barrell, B.
Submitted to the EMBL Data Library, April 1999
A; Description: Sequencing the distal X chromosome of Drosophila melanogaster.
A; Reference number: 217668
A; Accession: T13740
A; Molecule type: DNA
A; Residues: 1-572 < MUR>
A; Cross-references: EMBL: AL031765; NID: e1371523; PID: e1329906; PIDN: CAA21124.1
C; Genetics:
A; Cross-references: FlyBase: FBgn0000667
A; Introns: 218/2; 426/2
A; Note: EG: 22E5.10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Residues: 1-572 <MUR>
